

## Alpine Consulting Receives 2010 Information Management Solution Excellence Award from IBM

**October 25, 2010**  
**Las Vegas, NV USA**

Today IBM recognized Alpine Consulting, Inc. with the 2010 Information Management Solution Excellence Award. The award was announced at the IBM Information On Demand Conference in Las Vegas, NV. The award recognizes IBM business partners who have adopted cutting-edge Information Management technologies to develop successful, unique, and powerful Information On Demand solutions. Alpine Consulting has demonstrated considerable Information Management expertise by integrating products from IBM's Identity Insight and InfoSphere Information Server portfolios to create powerful, real-time threat and fraud compliance solutions. Alpine's solutions have enabled clients in manufacturing, government, wholesale, retail, insurance, distribution, financial services, gaming and transportation sectors to automate key information gathering and due-diligence activities required in efforts to prevent money laundering, fraud, and other compliance and operational risks.

Alpine's solutions, powered by IBM's Information Management software technologies, make it possible for clients to balance enhanced due-diligence and screening obligations with the competitive necessity to minimize the impact of these activities on customer service. Alpine was further recognized by demonstrating the ability to implement these solutions efficiently, within budgetary constraints and timelines required by the client. This is Alpine's second time to be honored with this award. The first being in 2008 and more information can be found at the following link: [2008 Information Management Solution Excellence Award](#).

### **About Alpine Consulting, Inc.**

Headquartered in Schaumburg, IL, Alpine Consulting is a professional Information Technology services firm focused on helping IT organizations deliver business value.
